

# Garment/Item Care Instructions

## **Clothing and machine washable items:**

1. **Let your garment sit without washing for at least 24 hours.**
2. **Do not dry clean.**
3. **Wash garments inside out and on a cold or 30 °C wash.**  
High temperatures can weaken the adhesive on the vinyl which can cause the vinyl to peel or crack.
4. **Use mild detergent.** Do not use Bleach and only a small amount of fabric softeners in order to make the vinyl last as long as possible.
5. **Dry on a low/tumble setting or hang dry – (Hang dry is recommended).** Just like when washing, you won't want to dry your garments on a high heat. If you stick with tumble dry on a low heat, you should be good to go. If possible, you can hang dry your garments for best results. Hang drying will minimize any wrinkles you see in the vinyl imaging after washing.
6. **Do not iron directly on a heat transfer design.** The high heat from the iron directly on the vinyl will melt the vinyl and or burn the adhesive. Regardless, ironing directly on vinyl is a great way to ruin an item. If you must iron the item, make sure to use low heat and place a dish towel or cloth over the transfer.

## **Glassware, Mugs, Jars, plastic items etc:**

1. **Do not use in Microwave** – the item itself may advise that it is safe to do so, but due to the modifications and hand crafted designs this is **not** the case.
2. **Do not put in dishwasher** - the item itself may advise that it is safe but due to the modifications and hand crafted designs this is **not** the case.
3. **Do not leave item in hot water or to soak.**
4. **Do not leave in direct sunlight or on a hot surface (e.g. a radiator).**
5. **Gently hand wash only with washing up liquid and warm water.**
6. **Do not use scrubbing sponge or abrasive materials when washing.**
